<About />

Hi, I'm Roman and I love to create cool and beautiful things with high attention to details. I care about writing clean code and I'm always eager to learn and perfect. I'm currently looking for the right opportunity to work in an environment that will help me progress.

<Education />

Bachelor's degree, State University of Infrastructure and Technologies, Kyiv

2015 - 2019

Area of Expertise Software Engineering qualification Specialist in Software Design and Testing

<Experience />

Spreadsheets

Based of a JavaScript Course this project was done and enhanced by me to develop and consolidate my vanilla JS skills. The goal of this project was to create vanilla JS framework from scratch and then create some kind of Google Spreadsheets clone.

React Quiz

React based SPA which allows you to create and store custom quizzes with register and login functionality. Initial idea was to create a Google Forms clone but with less functionality. Written with the use of React, React Redux, React Router, Axios. Uses Firebase Realtime Databse to store quizzes.

Mafia Randomizer

Typescript React based SPA for mafia game that includes roles randomization, timer and tools for creating, storing and editing game data.

Feedback Receiver

NestJS back end part and React front end app that sends feedback messages to PostgreSQL database.
